Intelligent Decision Supporting System

To select grade one students for a school

Introduction

- ICT systems become more complicated.

- DSS

- Intelligent Decision Supporting System (IDSS) is the next phase of DSS.

What's the problem????

- In Sri Lanka, all schools use human labor to do the daily process and management of the schools.

- Schools are one of the places where, use minimum technology.

- From applying to selecting students is done by using human and they help the process to happened without any issues and interruptions.

Importance of the problem

- More complicated
- Not reliable.
- May be biased to someone.
- Most of the parents have to bribe someone.
- More time consuming.
- Costly.
- Lack of efficient.

Any current solutions???

- No

- Only thing is parents can download the application form through the internet
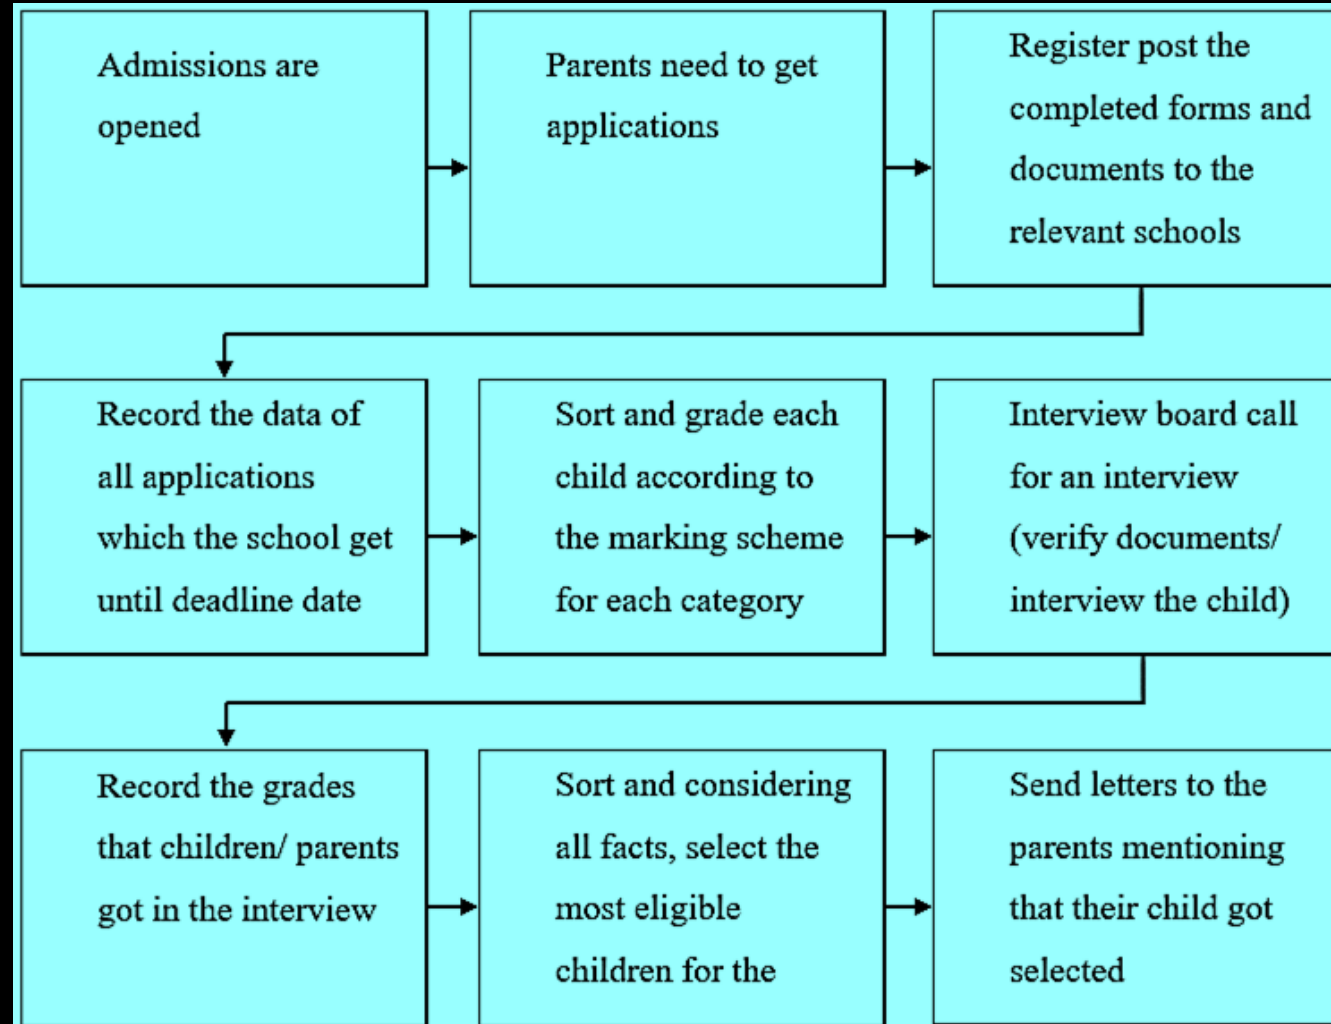

Proposed solution

- Fully automated system for both applying and selecting process.

- Only human involves in interviewing process.

- Works with a large number of data.

- Use database functions, algorithms, programs & AI features.

SOLUTION

Structure

Why this solution is better???

- Consumes less time but provides productive results.

- Will not have any prejudices or judgement towards students.

- The result of the system will be fair enough.

- Reduction of competency for popular schools.

- Provide equal opportunity to everyone

Conclusion

- Parents do not want this current method of applying admissions.

- Field of education need to adapt more technological improvements.

- Technological improvements is a must at present world.

THANK YOU !!!
